

2-VS Code Installation

VS Code Installation Steps

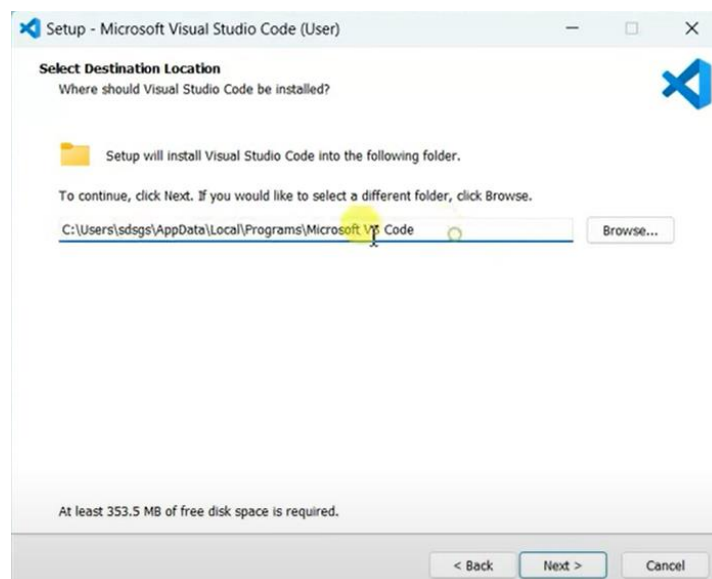

Installation Process

1. Run the installer:

- Click on the downloaded VS Code file.
- The User Agreement window will appear. Read the agreement, mark it as accepted, and click **Next**.

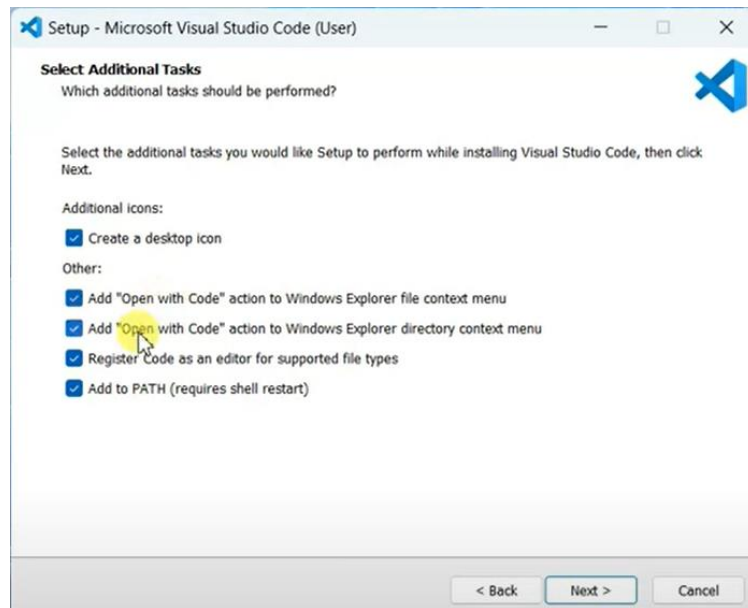

2. Choose Installation Directory:

- Select the directory path where you want to install VS Code on your laptop or desktop.

3. Select Additional Tasks:

- Click **Next**. A window with multiple checkboxes will appear, allowing you to create VS Code shortcuts. Check all the boxes to enable these shortcuts.

4. Begin Installation:

- Click **Next** to start the installation process. Once completed, you are ready to use VS Code.

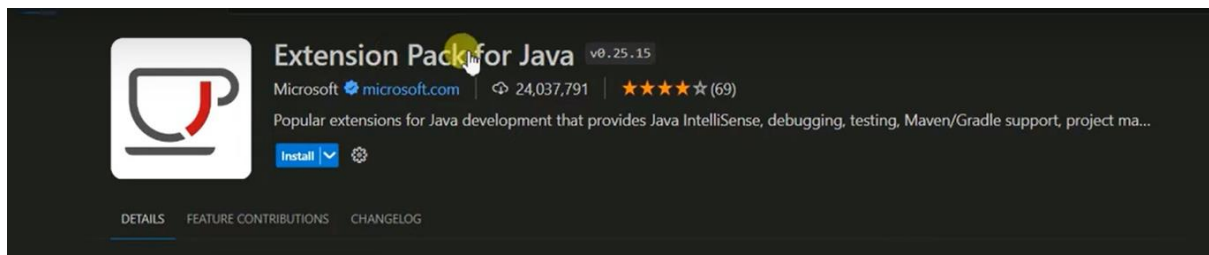

Adding Extensions

After the installation is complete and you open VS Code, you will see a blank page. To run Java code, you need to install specific extensions:

1. Java Extension Pack:

- Type "Java" in the Extensions view (Ctrl+Shift+X).
- The Java Extension Pack will appear at the top. Click **Install**.

2. Code Runner:

- Install the Code Runner extension to support multiple programming languages.
